PROJECTS

Scribe , Voice based Assistant made in Python A voice assistant made to assist with daily tasks without use of large language models. Can store events and set timers as well as search the internet. Uses specific activation key and code word to function, can run in background without restricting user's viewing experience.	08/2024 – Present
AttendEase , Academic scheduling & alert system A simple University Management System project, made in collaboration with my batchmates. Has multiple functions including:- • Attendance management • Assignment Submissions • Direct and Large Scale Alerts and Notifications • Leave Management and submissions • Substitution classes management Application and website both were deployed and used by my batchmates during our final year.	09/2025 – 06/2026
GitHub Repository Explorer , React Application A streamlined webpage that uses REST API calls to search the GitHub databases for the repository and returns the result based on the selected sorting method and the programming languages used. There are features like Bookmarks and Notes integrated into the website. The notes and bookmarks are stored in the device so they don't get lost on a refresh.	05/2025 – 06/2025
